PROJECTS

Learn2Earn-Career guidance platform for 12th grade students : 2025

A student guidance platform that helps learners after 12th by suggesting personalized career options based on their interests and strengths, teaching LinkedIn networking, offering an AI Spark Academy hub to explore AI, GenAI, ML, DL, LLMs, prompt engineering, and ethics, and providing a 2-month crash course for entrance exams like JEE, SRMJEEE, VIT, Amrita, and SSN.

Smart Irrigation & Plant Monitoring System : 2025

Developed an IoT-based smart irrigation and plant health monitoring system using soil moisture, temperature, and humidity sensors to optimize water usage, with a relay-controlled motor pump for efficient irrigation and a mobile app for real-time monitoring of environmental conditions, motor status, and plant disease detection, reducing water wastage and manual effort while wastage and manual effort while promoting precision farming.

Sensor for Detection of Microplastics in Water: 2026

Developed a low-cost, portable microplastic detection system using **ESP32-CAM, UV illumination, and OpenCV-based image processing** to enable real-time visualization and automated counting of microplastic particles, eliminating dependency on laboratory-based methods.
